

Copy / Print cost recovery solutions

The hub of all Unicard Copy and Printing services is the Terminal management server.

TMS as a system comprises of components and modules that work together to provide a complete terminal management, account management and web based reporting tool.

Future system expansion is possible by simply adding terminals, there are no further licence costs after the initial purchase.

The system seamlessly integrates with existing Intranets to place Copying and Printing data from terminals in the hands of the system administrator and users, with no software installations on client machines.

TMS reporting tools are all Web browser based, meaning reporting is as easy as browsing a website.

The system also provides the administrator an array of security and configurable functionality to allow TMS (Reporting, Accounting and Copy/Printing) to operate in a secure and functional manner that would be best suited for your organisation.
